Stress Patterns

Stress patterns in words are mostly unpredictable in English. However, some general rules can be applied to many words

- When a **noun or adjective** stems from a one-syllable word, (for example *break* and *friend*), the stress usually stays on the **syllable** of the **original word**.

Example: break – BREAKable, friend – FRIENDly

- With most of the **disyllabic nouns and adjectives**, stress is on the **first syllable**.

Examples: Nouns

PRE-sent

TI-ger

BREAK-fast

Adjectives

HAND-some

EA-sy,

HA-ppi

- With most **disyllabic verbs**, stress is on the **last syllable**.

Example: in-CREASE, be-GIN

- To differentiate between a **noun** and a **verb** with the same spelling, **stress position changes**.

Example: a DEcrease (Noun) to deCREASE (Verb)

an OBject (Noun) to obJECT (Verb)

- In **compound nouns** (two words merged into one) the stress is on the **first part**.

Example: BOOKshop, NOTEbook

- The words ending in **-TION**, **-SION** and **-CIAN** are usually stressed on the **second last syllable**.

Example: e-du-CA-tion, per-MIS-sion, phy- SI- cian

- Words ending with **-IC** are usually stressed on the **second last syllable**.

Example: rea-LIS-tic, stra-TE-gic

- Words ending with –ee or –oo are usually stressed on the last syllable. Example: gau- rent- EE, shamp-OO
- Note: When in doubt, do not stress. It is better to not stress than stress the wrong syllable.
